

Instructions to collect the sperm sample

Please **follow these instructions** to collect the sperm sample

The sperm sample must be collected through masturbation, **having previously washed your hands** and genitals carefully, to avoid any kind of contamination.

The sample will be collected in the **sterile container handed in previously to you**.

Do not use preservatives with cream or lubricants to avoid any alteration in the sample. Take the necessary time.

Collect all the ejaculation semen in the sterile container and **close it immediately**.

Verify that the names written in the identifying adhesive labels which have been handed in to you are correct. **Stick the adhesive labels** onto the container's lateral.

Place the container in the **indicated place**.

When finished, ring the doorbell and wait a few moments for the Eugin Clinic staff to come and collect the sample.

Fill in document PD-27-01 by electronic signature. Once you have signed it, the staff will tell you that you can leave.

**FOR YOUR SECURITY,
DO NOT LEAVE THE SAMPLE ALONE
AT ANY MOMENT**

Thank you for your collaboration.
